Excellent Charles. Thanks for finding this. I haven't heard anything else further so far.

Hi Lora,

This is what I typed from the tire fire template. Of course it hasn't been cleared. I wasn't able to find a cleared AROA or TA that I have written to send out.

Particulate matter

The classification of particulate matter falls into two categories: particles less than 2.5 microns in diameter (PM_{2.5}) and particles less than 10 microns in diameter (PM₁₀). Particulate matter is a mixture of materials that can include smoke, soot, dust, salt, acids, and metals. Particulate matter invades the respiratory system and can increase the number and severity of asthma attacks, cause or aggravate bronchitis, and reduce the body's ability to fight infections. ATSDR has not developed a comparison value for particulate matter, but the U.S. EPA has developed National Ambient Air Quality Standards (NAAQS) for PM₁₀ and PM_{2.5}. The U.S. EPA's National Ambient Air Quality Standards (NAAQS, 2012) state that the 24 hour average PM₁₀ concentrations are not to exceed 150 micrograms per cubic meter (µg/m³) more than once per year (on average) over a 3-year period. The NAAQS for 24 hour average PM_{2.5} is 35 µg/m³ averaged over 3 years and an annual average of 12 µg/m³.

The World Health Organization (WHO) has also developed air quality guidelines (AQGs) for PM₁₀ and PM_{2.5} which are more conservative than the U.S. EPA's NAAQS (WHO, 2006): □

- <!--[if !supportLists]--><!--[endif]-->PM₁₀: The WHO annual average AQG is 20 µg/m³ and the 24 hour AQG is 50 µg/m³.
- <!--[if !supportLists]--><!--[endif]-->PM_{2.5}: The WHO annual average AQG is 10 µg/m³ and the 24 hour AQG is 25 µg/m³.

For readings below the action levels, continue to conduct air monitoring to evaluate concentrations of contaminants. When environmental data or sampling equal or surpass the action level, additional review of exposure pathways for the site should be conducted. Based on the action levels, the decision to shelter in place or evacuate should be made.

Charles

Lora – thanks. I will take a look at the tables. I will let you know if we have any questions. I don't expect any questions until we see some of the data which probably won't be until morning. START is moving now and should be on-site shortly. We did not get any NRC notification until around 5:00 this evening and I have been focusing getting START out on the road.

Thanks for the quick response. If you google Ames Plant fire in Parkersburg – there are many Youtubes showing the fire.

Thanks, Deb.

I spoke directly to Charles Edge, who is the ATSDR ER Duty Officer this week. I am sorry you got that confusing response when you called the CDC 24 hour number.

Charles said ATSDR uses the EPA NAAQS Air Quality Index (AQI) guidelines for hazardous levels of PM in air in this kind of situation - see the attached AQI table. This is also part of the 2016 NRT presentation on "Air Quality Monitoring at Structural Fires" at <https://www.nrt.org/sites/40/files/Air%20Quality%20Monitoring%20at%20Structural%20Fires%20RT2%204%2013%2016.pdf>

Let me know if you want to discuss or if you have other questions as this goes on.

I need to pick up my daughter from the homecoming dance over the next 1/2 hour or so but I will have my cell with me. Charles is also watching email and can be reached at his mobile at 404-234-4471.

From: Wolfe, Aaron

SUBJECT:
Intercontinental Export
and Import Company -
Plant #1 Fire
Parkersburg WV.

At 1230 AM this
morning Parkersburg
fire crews responded to
a fire at the
Intercontinental Export
and Import Company -
Plant #1 on Camden

Avenue in Parkersburg WV. The facility is a warehouse housing many plastics related materials. Attached you will find a list of items thought to be in the warehouse. The fire is still ongoing. No shelter in place order has been implemented at this time in Parkersburg, Wv. OSC Wolfe is in contact with on-scene WVDEP representatives, Ohio EMA, and has notified ORSANCO and will continue to report with updates. Firefighting water is expected to enter the Ohio River. WVDEP is setting up air monitoring equipment. Currently given the wind direction WVDEP does not feel any Ohio Counties are threatened by the fire.

OSC Wolfe will continue to monitor the situation and provide updates every two hours or if additional information is provided from the scene.
